Course Offerings

There are two levels of foundation (introductory) classes that all GRC majors must take before moving on to higher-level classes. GRC 107, GRC 109, and GRC 110 are first level. These introduce students to the elements of design, color, and illustration. Challenge by portfolio/challenge exam for these classes is available, and students with equivalent experience may skip these classes with department approval.

Second level classes are GRC 118, GRC 119, and GRC 122, which focus on merging creative skills with the various software required in print, digital, and letterform media.

All six foundation courses are offered in the fall and spring — and sometimes during the summer session. Not all intermediate and advanced classes are offered every semester. Please check the schedule of classes or contact the department for sequencing of courses.

While manual skills are important in graphic communications, most classes focus on electronic skills using Apple computers and Adobe InDesign, Illustrator, Photoshop, Acrobat, Dreamweaver, Flash, Premiere, Soundbooth, After Effects, and Lightwave 3D software.
